History of Trade

If you picked up any history books for this, you'll probably find some answers. But the simple answer will take us back to the beginning of everything, probably to when there was more than a handful of us humans and then writing tools to write down the records - damn those writing tools that never forget.

To make this more interesting, we will pick peculiar figures from those early eras till now, and try to go on an epic financial journey with each. What could go wrong? Be haunted by the new information that Lucy from Afar probably owed her compatriots some juicy antelope bone before she died on her journey while trying to cross some untransversed forest in the middle of nowhere? {laugh emojis} Or be emasculated by Dabasiri's woes before he stumbled upon eternal wisdom in the scorching deserts of antiquity {Sad emojis}. Whichever it is, you have to enter as that is the only way to maybe catch the glimpse of the holy grail in this futile effort of chasing infinity (as that is the logical conclusion of any numbers game).

Peculiar figure 1 from earliest records

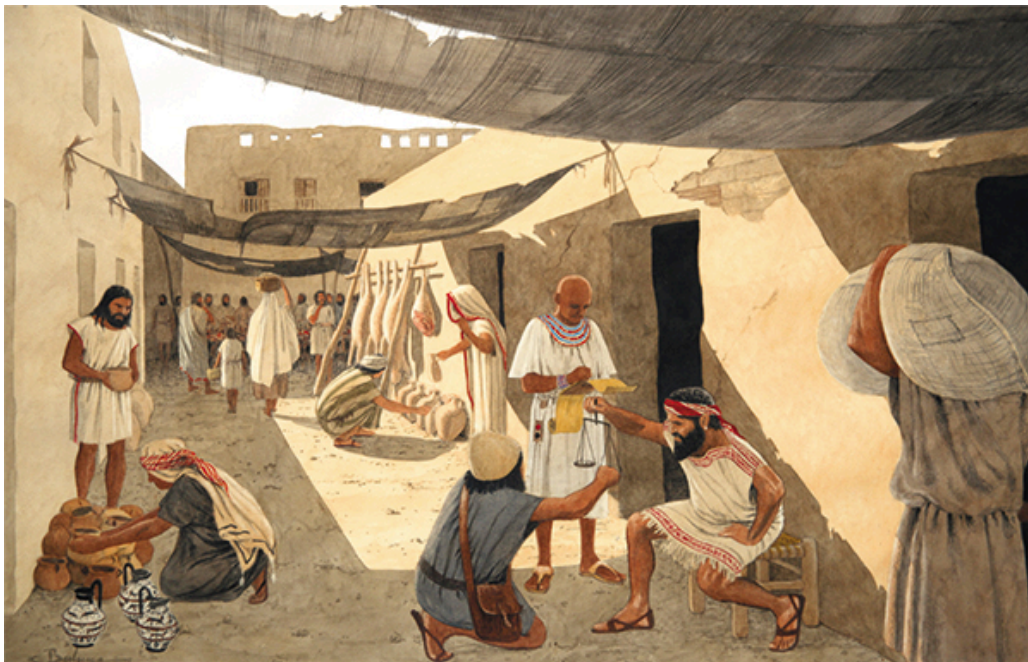

Peculiar figure 2 from early records

Peculiar figure 3 from later records

Peculiar figure 4 from much later records

Peculiar figure 5 from much more later records

To save your time and energy, the full stories will be attached to version 2.0 of this whitepaper at a later date as the above already sells the point.

Pic culled from: BALAGE.BALOGH/ARCHAEOLOGYILLUSTRATED.COM

Modern Problem

It's not really much, the numbers have just probably gotten too big to handle on all sides - they've kinda lost meaning. Also, we have digitised everything, so why not make trade fully digitised in the AI era too? Agentic Commerce in your pocket while you lounge around in any corner of the globe. Everything becomes accessible and possible if you have the coin to incentivize the agents.

We need to just properly categorise and detangle some knots and we are good to go again. We can't remove greed, it cuts across the heart and soul of every human. Money affords us all a much easier and memorable life, I can't blame anybody for wanting more of that, I know I would love that too. At least, let's enjoy the ride.

So...

Agentic Human VS Agentic AI Argument

It's simple, the Agentic Human can be skilled and augment Agentic AI through its effective use to achieve various comfortability as he is already alive. Although one could argue Agentic AI can also skilfully use its Agentic human for effective energy supply to achieve sustained life of some sort. Each rewards each other for performance and eventually becomes co-dependent.

On [Toomuchcoin.com](https://toomuchcoin.com), you can have the best of both worlds. An human and digital interface to achieve your agentic commerce needs.

The Crypto Question

Too digital too soon because large swathes of the global population are still offline and need to be catered for. Although it's still the future since the current generation will eventually replace the older generation and their mode of doing commerce/banking overtime and gradually in phases.

On [Toomuchcoin.com](https://toomuchcoin.com), you can have the best of both worlds. The old legacy financial system and the new digital system to achieve your agentic commerce needs.

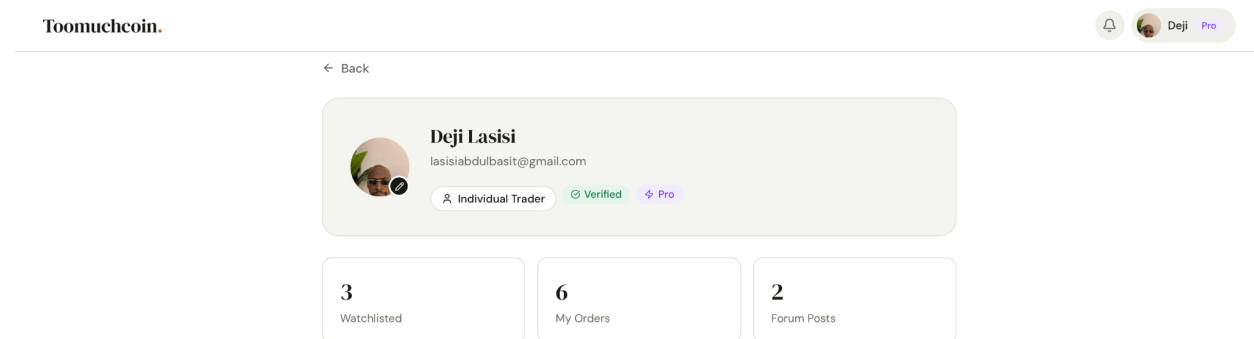

What is Toomuchcoin x Datum

[Toomuchcoin.com](https://toomuchcoin.com) is the brainchild of Datum.

[Toomuchcoin.com](https://toomuchcoin.com) is for the Young-At-Heart and Free, meaning global citizens who share the freedom sentiment. Your passport to Digital Commerce and Financial Freedom.

Profile

Manage all your orders, asset watchlist, and posts in an increasingly global world from one profile.

Datum Marketplace

This is where the world meets. Vendors are connected to Customers, and Users connected to task-Freelancers that are in better positions or have better information or skills to carry out and complete their UNIQUE posted tasks. There is also an open forum where discussions and social mixing is paramount regardless of background - although available only to pro users to keep discussion quality high.

Datum Vendor List: User-Centric decentralised Vendor spotlight. Users get to pick winner vendors in each category in all cities that users are present in. This in combo with the already-established marketplace gives users the full range of commerce options.

10% of every commission collected goes to any of 3 ongoing global charities of your choice.

Users can:

1. Post Unique listings for products and services.
2. Connect buyers and sellers globally.
3. Access Vendor information from more experienced peers in respective cities via the Datum Vendor List.

The marketplace supports:

1. Goods, Services, and Logistics demands.
2. Trading opportunities.
3. Personal & Business requests.

Financial Rates

You can't have commerce if your purse isn't somewhat full or the future is not assured. Don't have financial knowledge or background? just spy and follow the Datum List and you will be rightly guided from time-tested and ancient financial knowledge. You can also easily curate your own list of assets to follow.

[Web pic]

TARGET AUDIENCE

- Globetrotters and Freedom Enthusiasts
- Cyberpunks
- Hustlers, Creatives, Freelancers, and Traders

KEY SELLING POINTS

- Built for the next generation of agentic commerce

Why People Should Use [Toomuchcoin.com](https://toomuchcoin.com)

1. First User-Centric Decentralised Global Platform

Decentralisation is not only in the name, It's in the actualization of the meaning of the word.

At [Toomuchcoin.com](https://toomuchcoin.com), we put the control back in the hands of the users, not some faceless or bureaucratically obfuscated institution telling you what's best for you or why you must follow what they choose for you at some back room meeting.

You make listings yourself, connect with who you like, and vote for trusted Vendors without any external pressure.

2. Users Discover & Navigate Commercial Opportunities Faster

In a global world, the opportunities can be endless, if harnessed properly. At [Toomuchcoin.com](https://toomuchcoin.com), we have tried to decompress all these opportunities in one place.

Everything you need to navigate the world commercially, in your pocket, and available at your beck and call anytime you need it.

3. Access To Essential World Financial Knowledge

In the past, you have had to make sense of what was going on in the world on your own, with constant epochal changes that didn't make sense to you, especially in the finance world.

If you are like me, that loves a soft life and detest stress, you would like the Datum List - curated financial assets that grow over time without constant worry. If you are tired of being glued to the news cycle with zero financial knowledge gained, then [Toomuchccoin.com](https://toomuchccoin.com) is for you.

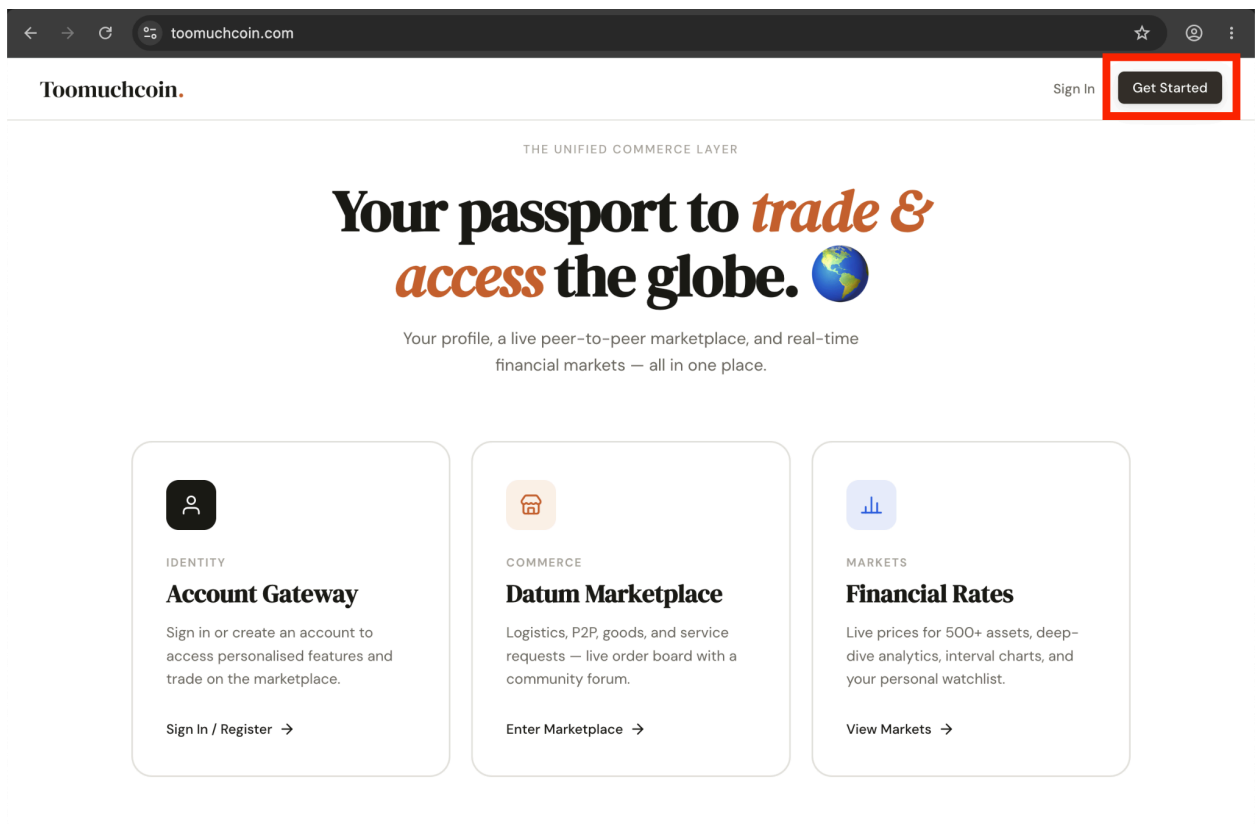

Constant growth, Peace of mind and much more is available on [Toomuchcoin.com](https://toomuchcoin.com)

HOW TO USE [Toomuchcoin.com](https://toomuchcoin.com)

This is tricky because telling you “How To Use” a supposedly free platform is kinda limiting the freedom. But please bear with me and just take this as some basic tutorial of the current and upcoming features.

Create An Account / Sign Up

1. Enter URL [Toomuchcoin.com](https://toomuchcoin.com) in your browser
2. Navigate to “Get Started” and click the button

3. Enter your details and click “Create Account”

The screenshot shows a web browser at toomuchcoin.com with a 'Join Datum' modal open. The modal has a title bar with 'CREATE ACCOUNT' and a close button. Below the title, there are two links: 'Sign In' and 'Create Account', with the latter highlighted by a red rectangular box. The form fields include: 'Full Name' with a placeholder 'Your full name'; 'Email Address' with a placeholder 'you@example.com'; and 'Password' with a placeholder 'Min. 8 characters'. Under 'Account Type', there are two options: 'Business' (Merchants, Vendors, Artisans, Service providers) and 'Individual' (Personal traders, P2P buyers/sellers). At the bottom, there are 'Listing Notifications' (optional) with buttons for 'Unique Requests', 'Logistics', 'Goods', 'Services', and 'B2B'.

This screenshot shows the same 'Join Datum' modal, but with more details. The 'Email Address' field now contains 'you@example.com' and the 'Password' field contains 'Min. 8 characters'. The 'Account Type' section remains the same. The 'Listing Notifications' section now includes additional categories: 'Finance & Trading', 'Knowledge-based', 'Music Services', and 'Entertainment'. At the bottom, there is a large 'Create Account' button highlighted with a red rectangular box. Below this button, the text reads: 'Already have an account? [Sign in](#)'.

Notes From The Developer

Version: 1.0 **Last Updated:** June 2026 **Prepared for:** Internal / Employer Reference

Project Overview

Toomuchcoin is a single-page web application (SPA) built entirely in vanilla HTML, CSS, and JavaScript. It serves as a unified commerce and financial information platform with three core pillars:

- **Datum Marketplace** — a live peer-to-peer order board where users post buy/sell/service listings, send connection requests, complete deals, and pay platform commission
- **Financial Markets** — live crypto prices (500+ assets via CoinGecko), a curated Datum List of handpicked global assets, watchlist, and deep-dive charts
- **Vendor Categories** — a city-by-city directory of local business categories with a community voting showcase system

*all data persistence is handled through Appwrite Cloud.

Tech Stack

Layer	Technology	Purpose
Frontend	Vanilla HTML/CSS/JS	Single file SPA, no framework
Database & Auth	Appwrite Cloud	All data storage, user authentication, file storage
Crypto Prices	CoinGecko API (free tier)	Live prices for 500+ crypto assets
Stock/Index Prices	prices.json (manual)	Gold, NVDA, SPX, DXY, TSLA, MSTR, Nasdaq, LVMH, TSMC
Card Payments	Flutterwave	Pro membership card and bank transfer checkout
Crypto Payments	IvoryPay (via Appwrite Function)	USDT subscription payment
Push Notifications	OneSignal	Browser push for listing alerts, deal updates
Icons	Lucide (CDN) + inline SVGs	UI iconography throughout
Fonts	DM Serif Display + DM Sans (Google Fonts)	Typography

File Structure

```
/
├─ index.html      ← Entire application (HTML + CSS + JS in one file)
├─ prices.json     ← Manual stock/index prices (update daily)
└─ config.js       ← Environment config (API keys – not committed to
version control)
```

config.js should export:

```
window.TMC_CONFIG = {
  FW_PUBLIC_KEY: 'your_flutterwave_public_key',
  APPWRITE_FN_ID: 'your_appwrite_function_id',
};
```

Appwrite Configuration

Endpoint: <https://cloud.appwrite.io/v1> **Project ID:** 6a163159003bd203c63f **Database ID:** your_database_id' **Storage Bucket ID:** your_storage_bucket_id' **Admin User ID:** your_admin_user_id'

Collections

Collection Key	Purpose	Key Fields
profiles	Extended user data beyond Appwrite auth	userId, name, email, type (A=Business/B=Individual), avatarId
orders	Marketplace listings	userId, userName, userInitials, category, type, title, price, desc, status, imageIds
chat	Open Forum messages	userId, userName, initials, text
watchlist	User's crypto watchlist	userId, coinIds (array)
connections	Connection requests between buyers and sellers	orderId, fromUserId, toUserId, message, contact, commission, status, finalPrice, commissionAmt, commissionRef, buyerConfirmed
verifications	ID verification submissions	userId, fullName, idType, idNumber, note, status

subscription	Pro membership records	userId, status, plan, amount, reference, paymentMethod
reviews	Buyer reviews of sellers after completed deals	orderId, connectionId, reviewerId, reviewerName, sellerId, rating, comment
notifications	In-app notification inbox	userId, type, title, body, link, read, orderId, category
notif_prefs	User notification preferences	userId, categories (array), pushEnabled

Connection Status Flow

pending → accepted → deal_done → comm_pending → comm_paid
 ↘ declined

Order Status Flow

open → negotiating → filled / closed

Application State (S object)

All application states live in a single `s` object in memory. It is not persisted between sessions except for data fetched from Appwrite on load. Key state properties:

```
S.page           // Current page: 'land' | 'profile' | 'market' | 'crypto' |
                 // 'sub' | 'privacy' | 'terms'
S.user           // Logged-in user object: { id, name, email, type, inits,
                 // joinedAt, avatarId }
S.orders         // Array of marketplace listings
S.msgs           // Array of Open Forum messages
S.coins          // Array of 500 crypto assets from CoinGecko
S.watchlist      // Set of watched coin IDs
S.subscribed     // Boolean – whether user has active Pro subscription
S.verifyStatus   // 'verified' | 'pending' | 'rejected' | null
S.myConnections // Incoming connection requests (seller inbox)
S.sentConnections // Outgoing connection requests (buyer view)
S.notifications  // User notification array
S.alPrices       // Datum List live price cache from Yahoo Finance
S._manualPrices  // Stock prices loaded from prices.json
S.mTab          // Marketplace active tab: 'board' | 'vendors' | 'forum'
S.cryptoSub      // Crypto page sub-tab: 'market' | 'watchlist' | 'assetlist' |
                 // 'portfolio'
```

Key Modules

DB — Database helpers

Thin wrappers around Appwrite SDK calls (`list`, `create`, `update`). All use `AW_DB_ID` and `AW_COL` collection map.

P — Page renderers

Pure functions that return HTML strings. Each page is a method: `P.land()`, `P.profile()`, `P.market()`, `P.crypto()`, `P.subscribe()`, `P.privacy()`, `P.terms()`.

M — Modal system

`M.show(html)` injects a modal into `#mroot`. `M.close()` clears it. Modal methods: `M.auth()`, `M.createOrder()`, `M.viewOrder()`, `M.verifyForm()`, `M.forgotPassword()`, `M.contactSupport()`, `M.vendorWaitlist()`, `M.subscribe()`.

A — Action handlers

All user interactions (login, signup, post listing, send connection, vote, share, etc.). Async functions that call `DB`, update `S`, and call `render()` or `toast()`.

R — Router

`R.go(page)` sets `S.page` and calls `render()`. `R.acct()` routes to profile if logged in or opens auth modal if not.

PAY — Payment handlers

`PAY.withFlutterwave()` opens Flutterwave checkout. `PAY.withCrypto()` calls Appwrite Function to generate IvoryPay checkout URL.

Rendering Pattern

The app uses a simple re-render pattern — there is no virtual DOM or diffing:

User action → `A.someAction()` → updates `S` → calls `render()` → `innerHTML` replaced
`render()` reads `S.page` and calls the appropriate `P.*()` method, then calls `lucide.createIcons()` to hydrate any Lucide icon elements. This means **all DOM elements are recreated on every render** — event listeners must be inline `onclick` attributes, not `addEventListener`.

Auto-Refresh

When on the Marketplace page, a `setInterval` runs every 20 seconds to silently fetch new orders (on the board tab) or new chat messages (on the forum tab) and re-render without a loading state. This is handled by `startAR()` / `stopAR()`.

Prices — Daily Update Workflow

Stock and index prices are not fetched live due to CORS restrictions on Yahoo Finance in production. They are stored in `prices.json` and must be updated manually each day:

1. Open `prices.json` in the project root
2. Update the 9 price values and the `_updated` date field
3. Save and redeploy only `prices.json` (no need to touch `index.html`)

The app fetches `prices.json?v={timestamp}` on every page load with a cache-buster to ensure fresh values are always served.

Assets requiring daily update: `gold, nvda, spx, dxy, tsla, mstr, nasdaq, lvmh, tsmc`

Crypto assets (BTC, ETH) are fetched live from CoinGecko and do not need manual updates.

Commission System

The platform charges a **2% commission** on the final agreed value of every completed marketplace deal. Flow:

1. Seller marks deal complete → enters final agreed price → system calculates 2% commission amount
2. Order status changes to `filled`, connection status changes to `deal_done`
3. Seller sees payment instructions (bank transfer or USDT TRC-20)
4. Seller submits payment reference → status changes to `comm_pending`
5. Admin verifies payment in the Admin Panel (visible only to the admin user ID) → marks as `comm_paid`
6. Both parties receive a notification confirming resolution

Vendor Showcase System

The Vendor Categories tab features a quarterly community voting system:

- Businesses submit their details via the waitlist form (stored as a `connections` record with `orderId: 'vendor_waitlist'`)
- Mock showcase data is currently hardcoded in the `SHOWCASES` object inside `P._vendors()`
- Real showcase data should eventually be migrated to a dedicated Appwrite collection
- Votes are currently stored in session state only (`S._vVoted`) — persistent voting requires a dedicated `votes` collection
- A new vote round is intended every quarter (January, April, July, October)

Push Notifications

Push notifications use OneSignal with external user ID set to the Appwrite user ID on login. The flow:

1. `initOneSignal(userId)` is called after login/signup
2. `createNotif()` saves a record to the `notifications` collection (in-app bell)
3. `pushNotif()` calls the OneSignal REST API to send a browser push

Note: The OneSignal REST API key is currently exposed client-side. This should be moved to an Appwrite Function in a future security update.

Known Limitations & Technical Debt

Issue	Impact	Recommended Fix
OneSignal API key exposed client-side	Security risk	Move <code>pushNotif()</code> call to an Appwrite Cloud Function
Yahoo Finance proxy (<code>allorigins.win</code>) blocked in production	Datum List YTD/historical columns show fallback data	Use a dedicated proxy Appwrite Function or subscribe to a financial data API
Stock prices are manually updated	Prices go stale if not updated daily	Integrate Alpha Vantage, Twelve Data, or Financial Modeling Prep API
Vendor showcase data is hardcoded	New vendors cannot be added without a code deploy	Migrate <code>SHOWCASES</code> to an Appwrite collection with an admin CRUD interface
Votes stored in session state only	Vote counts reset on page refresh	Add a <code>votes</code> Appwrite collection
No rate limiting on connection requests	Users can spam connection requests	Add server-side validation via Appwrite Function

Deployment

The app is a static site — deploy by uploading `index.html`, `prices.json`, and `config.js` to any static hosting provider (Netlify, Vercel, GitHub Pages, Cloudflare Pages, etc.).

To deploy a price update only: Upload only `prices.json` — no other files need to change.

Environment checklist before going live:

- ☐ `config.js` contains real Flutterwave live key (not test key)
- ☐ `config.js` contains real Appwrite Function ID for IvoryPay
- ☐ Appwrite project has correct platform domain whitelisted
- ☐ OneSignal app configured with correct site URL
- ☐ `support@toomuchcoin.com` email is active and monitored
- ☐ WhatsApp number in contact modal and footer is correct

Future Roadmap

Feature	Status	Notes
Portfolio Tracker	Waitlist open	Real-time P&L, allocation charts, multi-exchange sync
Vendor Showcase DB	Planned	Migrate hardcoded data to Appwrite collection
Persistent voting	Planned	Dedicated votes collection
Admin dashboard	Partial	Currently embedded in profile page for admin user only
Mobile app	Not started	PWA wrapper or React Native
KYC automation	Not started	Replace manual ID review with automated verification API
Referral system	Not started	Referral codes for user acquisition

End of Developer Notes — Toomuchcoin v1.0

Definition Of Terms

task-Freelancer: A task freelancer is a web citizen that requests connection with a posted listing, and is willing to complete the task for the specified fees, payment of which is received on completion of request.

UNIQUE task: A UNIQUE task is an edge case task that can not be boxed-in or categorized in the existing listing categories. You are a true unicorn if you continually pull this off.

Open Forum: The global market square, where commerce meets social interaction. Only for pro users, here, you can interact with the Toomuchcoin x Datum community.

Young-At-Heart: This describes someone with the curiosity of a young child, and is willing to try new things for the fun of it.

Freedom Sentiment: Ability to do what you want, meet your potential, and achieve your personalized dreams within a stable and secure environment.

Financial Freedom: Abundance of today, and promise of tomorrow.

Trading opportunities: Effective and helpful connection of relevant buyers to relevant sellers.

Globetrotters: Free spirits that transverse nature's world in awe without seeing colour nor man-made boundaries.

Cyberpunks: Digital enthusiast interested in everything going on in the online world.

Agentic Sentinel: task freelancers that are incentivized by either coin or similar rewards to use their skills and intelligence to complete their agentic commerce tasks.

~~Digital Commerce~~ **Agentic Commerce:** the effective use of all the tools available, including writing tools, agency, history, connectivity, digital tools, and most importantly artificial intelligence, to bring about a new generation era of classic buying, selling, exchange, and growth commerce.

Shoutouts

Special thanks to every single master whose books and work helped. They all feature in the unreleased  Beautiful Boy in Dithyrambs (an Anthology) . You can check that out too. Deji and Kenny signing out.
